FARQUHAR'S POT-GROWN STRAWBERRY PLANTS.

Strawberry
Suburban.

All the varieties offered are perfect-flowering (bisexual) except where marked P. The latter are pistillate and require a row of a perfect-flowering sort planted every 8 or 10 feet to pollinize their blossoms.

These, if planted in July and August, produce a large crop the next Summer. Being grown in pots they may be shipped to a distance and planted with almost no interruption to their growth. The plants may be set in beds of three rows, one foot apart and one foot distant in the rows, with a space of two and one-half feet between the outside rows of adjoining beds left for a pathway. They may also be planted in single rows three feet apart and one foot apart in the rows.

POT-GROWN PLANTS. From 2½ in. pots, well rooted; delivery in July and August. \$3.50 per 100; \$15.00 per 500; \$30.00 per 1,000 for all varieties except where otherwise priced.

FIRST EARLY.

Alpha. A new, very early variety, producing strong, vigorous plants which are very productive. The fruit is of large size, attractive color and fine quality. \$4.00 per 100; \$38.00 per 1,000.

Early Ozark. One of the most productive early varieties, producing large dark-red berries of rather acid flavor but very delicious. The plants are of vigorous growth with fine dark-green foliage.

Excelsior. This is decidedly the best early strawberry and the earliest good strawberry. The fruit is of round conical form, glossy, dark-red color, and of mildly acid flavor.

Success. Large, round, bright scarlet, flavor always fine.

St. Louis. A very productive, early variety, with large berries, similar to Excelsior. The plant is of vigorous growth and a good sort for the home garden.

Suburban. This berry is exceedingly productive, thriving well on light land, and is considered one of the best new sorts. Fruit large, conical, firm and of good flavor. \$4.00 per 100; \$38.00 per 1,000.

SECOND EARLY.

Climax. This is an extremely popular new variety, immensely productive, the berries being slightly over medium size. Plant vigorous, healthy grower, of a peculiar shade of green that can be distinguished from other varieties.

Sample P. Excellent for either market or home use; prolific, large, firm and delicious.

Glen Mary. Large, conical, bright red berries; fine flavor.

Senator Dunlap. Mr. Crawford, at the time of its introduction by him, said that he doubted if he had ever sent out a berry better than Senator Dunlap. It will keep in fair condition for several days on the vines after being ripe enough to pick. The fruit is large, rich and dark red clear to the centre, with a very rich flavor.

MEDIUM.

Abington. A strong native variety of recent introduction. The fruit is of large size, bright red in color, very solid and of excellent flavor.

Barrymore. This fine strawberry was awarded a Silver Medal by the Mass. Hort. Society in 1908, for its excellence. The plants are of strong growth and very productive. The conical shaped berries are of medium size and of a dark, glossy, crimson color; the flesh is a rich red and very juicy. \$4.00 per 100; \$38.00 per 1,000.

Big Joe. A magnificent new strawberry of robust growth and very prolific. The berries are light crimson in color, unusually large and of fine quality. \$4.00 per 100; \$38.00 per 1,000.

Bubach, P. A well-known popular variety, with large berries of a rich, bright red color.

Brandywine. A large heart-shaped berry, perfect in form, bright red in color, firm flesh, red to the centre and of rich spicy flavor. A great cropper, especially on heavy soils, holds its fruit well up from the ground and generally succeeds everywhere.

Golden Gate. A strong growing variety bearing rich crimson fruit without green tips and with quality similar to the *Marshall*. It blooms early and late, making it a good variety to pollinize the pistillate sorts.

Golden Gate.

SECTION OF THE ASSOCIATION

31 SELECT VARIETIES.

INDEXED.

For full crop next summer
plant early.

Strawberry Marshall.

MEDIUM.

King Edward. A very productive mid-season variety with large conical glossy-red berries of delicious flavor. The plants are of strong healthy growth with large dark-green foliage.

Longfellow. The plants of this fine new variety are of vigorous growth and very productive. Fruit highly colored, conical in shape and inclined to be long.

Marshall. The fruit of this remarkable sort is of enormous size, of handsome, glossy, dark crimson color, and of delicious flavor. It is one of the best midseason berries, either for private use or market. It is a vigorous grower and requires good soil and high cultivation. As it does not thrive in all soils, it should not be planted extensively until its adaptability is ascertained.

McAlpin. This new variety was originated in New Jersey and is considered by many growers to be one of the best of the newer introductions. The berries are a beautiful scarlet in color, very large and of rich luscious flavor. Very productive. \$4.00 per 100; \$38.00 per 1000.

New York. One of the best sorts for private or market gardens. The berries are large, of conical form; dark red color, firm texture, and of remarkably sweet flavor. In the market they sell at sight.

Nick Ohmer. Dark glossy red globular berries of superior flavor; fine for forcing.

LATE TO VERY LATE.

Belmont. This old favorite is still considered by many to be the finest late berry. The fruit is of handsome appearance and keeps well.

Chesapeake. The plants of the Chesapeake are large and vigorous, with rich dark green foliage. The fruit is of large size, deep red in color and of a rich aromatic flavor.

Commonwealth. This is the latest of all strawberries; bearing large conical, deep crimson fruit, sweet and of quality equal to the well-known Bubach. Not only an extra large berry, but also very productive, of deep rich color, solid and quite juicy.

Minute Man. P. A very productive sort, of fine quality.

Gandy. This popular old variety is probably known by most berry growers. It is more largely grown than any other late variety. On sandy soils it is unproductive.

Rewastico. A very productive new variety. The plants are of vigorous growth with an abundance of dark green foliage and producing uniformly large berries. Color a rich cardinal red penetrating to the centre. \$4.50 per 100; \$42.00 per 1,000.

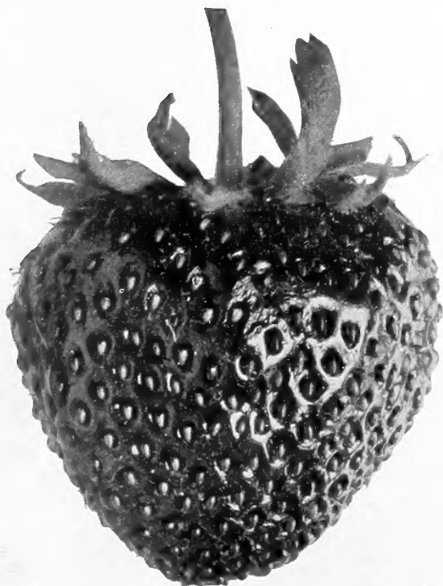

William Belt. An exceptionally fine berry. In quality it heads the list. The berries are as large, with some specimens larger than the Bubach. Its color is a glossy, deep red; late as Gandy.

FALL-BEARING STRAWBERRIES.

The fall Bearing varieties produce fruit at the same season as the ordinary Strawberries, but keep bearing until frost. To get the best results for a late crop, the blossoms must be carefully kept off until July, or the plants will completely exhaust themselves before fall. If the runners are kept cut during summer it will give additional vigor to the late crop.

Progressive. This variety was introduced by Mr. Harlow Rockhill and is considered by many growers to be one of the best perpetual-bearing strawberries. The fruit is rich and sweet, a deep red inside and out; of good medium size and quite firm. \$8.00 per 100.

Superb. The fruit of this variety is medium to large and very attractive. The berries are a glossy dark red, aromatic and of excellent quality. \$8.00 per 100.

Barrymore.

New and Rare Plants from the Wilds of China.

Collected for the Arnold Arboretum of Harvard University by the indefatigable plant collector, Mr. E. H. Wilson, in remote and hitherto unexplored regions.

Gold Medal Awarded by the Massachusetts Horticultural Society.

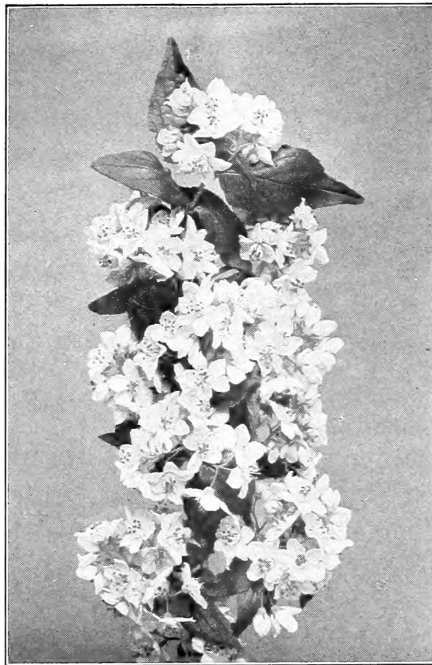

A number of these plants were offered by us last year for the first time. We now offer for the first time another group of these plant treasures. They are attracting universal interest, many orders coming from Europe, Japan and other parts of the globe. They are unquestionably the finest plant novelties extant.

AMPELOPSIS Henryana. (*Vitis Henryana*.) In habit, this new climber resembles our native woodbine. The ground color of the leaves is dark velvety green, with the mid-rib and principal veins silvery white. The foliage has a very striking appearance in autumn when the ground color changes to vivid red, the mid-rib and vein remaining white. In Massachusetts, this vine requires protection during winter, but would probably prove quite hardy south of New York, or even farther north where the influence of the ocean moderates the temperature. Award of Merit by the Royal Horticultural Society of London. Each 30 cts.; doz., \$3.00.

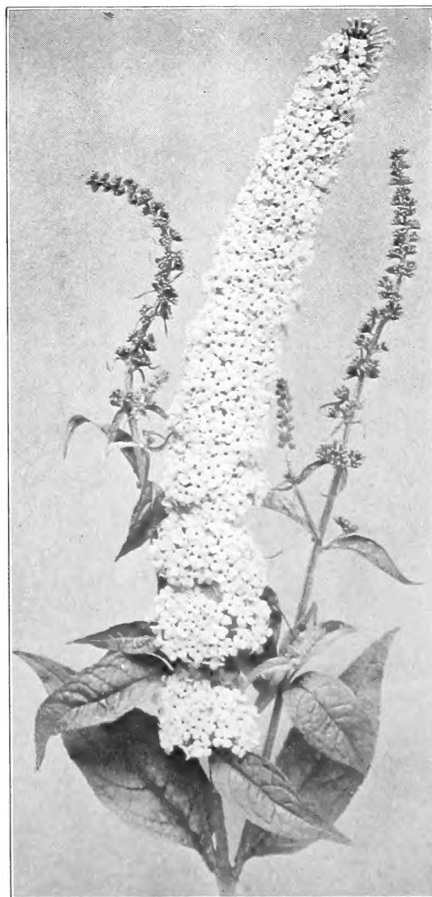

AMPELOPSIS Thomsonii. (*Vitis Thomsonii*.) This charming new climber is one of the most beautiful of the Woodbine family. It requires protection during winter. The leaves are greenish purple above, and bright claret color beneath; changing in the Autumn to rich red. Award of Merit by the Royal Horticultural Society of London. Each, 30 cts.; doz., \$3.00.

AMPELOPSIS aconitifolius dissecta. A perfectly hardy vine, growing 8 to 10 ft. tall, with elegantly dissected foliage and bright blue fruit; splendid for trellises. Each, 75 cts.; doz., \$7.50.

BERBERIS brevipaniculata. A bush 4 to 6 ft. tall with wedge shaped small leaves clustered together and assuming fine tints in autumn. The small yellow flowers are freely produced on erect panicles 3 to 5 in. long. These are followed by masses of salmon-red fruits in early Autumn. The foliage is retained very late. Its several fine qualities make this new Barberry one of the handsomest and most distinct of its class. Each, 50 cts.; doz., \$5.00.

Deutzia discolor.

Buddleia variabilis magnifica.

BUDDLEIA asiatica. "*White flowered Winter Lilac.*" An elegant pot plant suitable for general decorative purposes and cut flowers. Cultural requirements same as those of Chrysanthemum. Blossoms December to March; every shoot terminating in a slender tail of pure white, deliciously fragrant flowers. A notable acquisition. Each, 25 cts.; doz., \$2.50.

BUDDLEIA officinalis. "*Winter Lilac.*" An excellent companion to *B. asiatica* with rose-pink fragrant flowers, each with orange eye and produced in terminal, branched tails. Flowering season same as that of *B. asiatica*. Award of Merit, R. H. S., London. Each, 25 cts.; doz., \$2.50.

BUDDLEIA variabilis Veitchiana. "*Summer Lilac.*" Late summer and early fall blooming shrub suitable for beds or masses in the shrubbery. The lilac-colored flowers are borne in cylindrical tails 20 to 30 in. long at the ends of the shoots. Awarded F. C. C. by the R. H. S., London. Each, 50 cts.; doz., \$5.00.

BUDDLEIA variabilis magnifica. The individual flowers are larger than those of *Veitchiana*, intense violent-purple in color with reflexed margins and orange eye. One of the finest acquisitions of recent years. A fairly rich soil, sunny position and abundance of water are the essentials for the successful culture of "*Summer Lilac.*" Each, 50 cts.; doz., \$5.00.

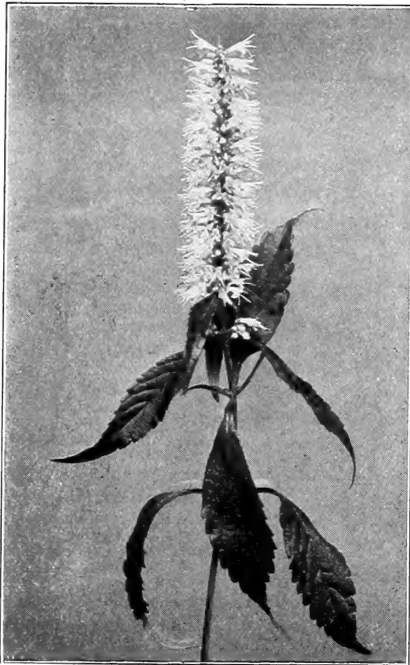

BUDDLEIA variabilis superba. Perhaps the finest of all the summer Lilacs. It has erect arching shoots 5 to 6 ft. tall, and immense tails of rich lilac-colored flowers. Each, 75 cts.; doz., \$7.50.

BUDDLEIA variabilis Wilsonii. The latest of all the Summer Lilacs to flower. It blooms in September and bears immense tails, sometimes attaining 30 inches in length, of bright rosy-lilac flowers with orange eye. Each, 50 cts.; doz., \$5.00.

CLEMATIS montana rubens. This beautiful hardy, new Clematis begins to bloom early in June when a profusion of soft rosy-red blooms resembling those of the Japanese Anemone are produced. As the flowers are borne on the young wood, they appear more or less freely until frost. A First Class Certificate was awarded to this plant by the Royal Horticultural Society of London. Each, 50 cts.; doz., \$5.00.

CLEMATIS tangutica. A fine Chinese variety of free and rapid growth; bright green dense foliage. A good climber and one of the best ground-covering and trellis plants. Flowers bright yellow. June-July. Each, 30 cts.; doz., \$3.00.

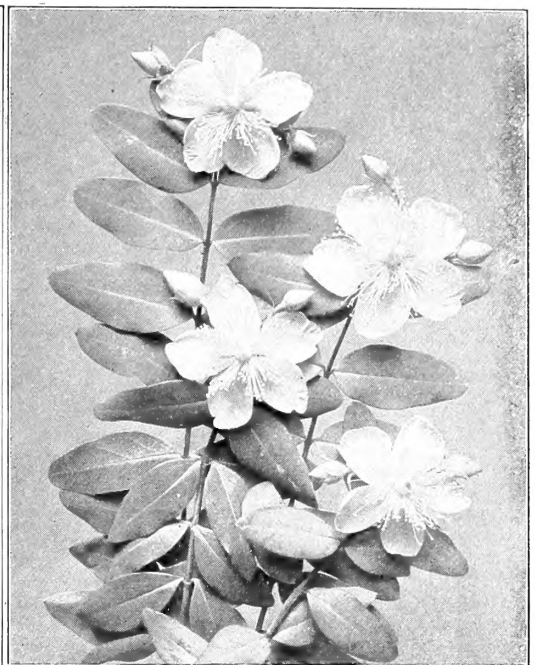

FARQUHAR'S NEW AND RARE CHINESE PLANTS.—Continued.

PANSIES.

Culture of Pansies.—Pansies thrive best in a cool, moist, but well drained soil, enriched with well rotted barnyard manure, or fine ground bone. Seeds sown in Spring in a partially shaded situation will produce fine plants for Autumn flowering. The finest blooms are to be obtained, however, by sowing in July or August, giving the plants protection during winter, when they will bloom profusely in the spring and summer.

ENGLISH AND JAPANESE GARDEN CONSTRUCTION.

Rustic work is now regarded as an indispensable element in natural garden composition.

Each situation calls for its own particular treatment, and we, therefore, aim to adapt our work to its environment. For this reason, we rarely build two Pergolas or Summer Houses alike.

We are prepared to furnish estimates on contemplated work. In our construction we use red cedar, white cedar, black Canadian spruce and laurel.
